

Wood Chipping Machine

The drum type wood chipping machine is an ideal equipment producing wood chips, widely used in paper plants, particle and fiber board plants, wood chip production and export bases. The raw material such as logs and small wood branches, twigs can be cut into high quality wood chip with even length and uniform thickness. The wood chipping machine can also be used for processing wood planks after brief treatment.

The length of wood chip are required in different sizes according to different applications in paper plants, particular and fiber-board industries. To meet market need, our company has improved different kinds of wood chipping machines recently. The new models of wood chipping machine have more merits than the old ones. All the features show that BX Series drum type wood chipping machine is very suitable for market, especially in feed mill machinery or wood pelletizing plants.

- 1).It adopts advanced technology with high efficiency. Operation and maintenance is very convenient;
- 2).It is widely used to process log wood,slab, bamboo, cotton straw,etc;
- 3).It consists of machine body,cutting roller,top and bottom feeding roller,conveyor,hydraulic system,etc;

Model: BX213 wood chippers
Capacity (m³/h): 3-5
Main drive motor power (kw): 30
Feed roller motor power (kw): 1.1x2
Weight (kg): 1200
Overall Dimensions(LxWxH) (mm): 3680x870x900

Model: BX215 wood chippers
Capacity (m³/h): 4-5
Main drive motor power (kw): 45
Feed roller motor power (kw): 2.2x2
Weight (kg): 2900
Overall Dimensions(LxWxH) (mm): 1540x1240x1020
